
I found this little gem of a 6 in 1 universal remote control on ebay. TCM 246912 But sorry for the seller. Product does not meet the description. There are no chips on the board, no elements. I don't even know what it is. I don't know how it works. What should I do with it? How to get money back for it? I think it should be returned to the seller. Can he make a refund? If not, how can I do it? I don't understand what I did wrong. I can't find any documentation for this remote. Does anyone have a solution? PS: I got the same as in the article about it. It's nothing more than a simple card fffad4f19a
