The following table contains a list of applications and their maximum number of installations that are compatible with Adobe Acrobat Pro DC. See also Adobe Reader Pro X, Adobe Acrobat Pro, and Adobe Acrobat Reader applications. [Adobe Acrobat Digital Editions](#) [Adobe Acrobat Pro DC References](#) [External links Category:PDF software](#) [Category:Microsoft Reader](#)Q: multiple classes with one instance - ruby So I have two classes, I'd like to have a user defined class with the same name and constructor as the '::User' class. I'm trying to achieve the same thing as what is shown in the example on the answer to this question but I am getting an error: NoMethodError in UsersController#index Showing

```
/home/jont/work/project/app/views/users/index.html.erb where line #9 raised: undefined method `new' for #
app/models/user.rb class User include Mongoid::Document field :name, :type => String field :password_hash,
:type => String #.attribute :name attr_accessor :password_hash def initialize(name, password) self.name =
name self.password_hash = password_hash(password) end def remember self.password_hash =
password_hash end def forget self.password_hash = nil end end app/models/password_hash.rb module
PasswordHash extend ActiveSupport::Concern # Called to hash a user's password. def
password_hash(password) # Gonna be using a library that is embedded in the config file.
Digest::SHA1.hexdigest(password) end end app/models/user.rb class User include Mongoid::Document field
:name, :type => String field :password_hash, :type => PasswordHash #.attribute :name attr_accessor
:password_hash def initialize(name, password) self.name = name 2d92ce491b
```
