

## Oracle 9i Free Download Full Version

## Why is an "ORACLE" Documentation Team a Good Idea? > Oracle9i Documentation Team > > At this point, you are probably wondering why we are an ORACLE Documentation Team rather than a Sun Documentation Team. That's a good question, and it's a question that is not easily answered. > First of all, we are much different from a Sun Documentation Team, in that we do more than create the documentation. We are also involved in the development of the products, we are an Oracle9i Extension team, and we are an Oracle9i Community team. > Additionally, our documentation is something that is created by the community. While we do have a technical lead who helps guide the direction of the documentation, we rely on you to report bugs, add comments, and to help improve the content, style and structure of the documentation. > So, why do we use the name "ORACLE" and not the name "Sun" for the documentation team? > Perhaps the answer to that question is more important than you think. It is so that all the documentation can be easily distributed, both on the internet and to your users. > In terms of the internet, there is no other documentation team that I know of that distributes the documentation as a complete package, like we do. All of the documentation can be downloaded for free, and the documentation is organized by product, with each product being divided into its own directory. > In terms of distribution, our documentation is distributed as a single package that anyone can download. > By saying this, I mean that anyone can read the documentation, at no cost. They can also change the documentation, report bugs, make suggestions, and be an active participant in the development of the documentation. > In the future, we may have individual documentation packages that cover specific products. But right now, for the majority of our documentation, the single package is a good solution. > Also, the name "ORACLE" is a way for us to make it clear that the documentation is created by Oracle, not Sun
