
Native Instruments Action Strings [Kontakt] Serial Key VERIFIED Keygen

Native Instruments Action Strings is a free Kontakt instrument containing 15GB of dynamic phrases that have been recorded by Dynamedion and performed by the FILMharmonic Orchestra. Features Structure The libraries consists of 2 parts; a library of pre-recorded strings arranged over a pre-recorded instrument track and then an additional bank of 'mood' strings which sound more cinematic than the previous versions. Pre-recorded strings The pre-recorded library of strings uses Kontakt's String Engine for extensive control over each of the strings. It was recorded and produced by Dynamedion (Sebastian "Krokus" Krantz) and is performed by the FILMharmonic Orchestra. Arrangements Three different ways of arranging strings are provided; Key Modulation, Sequencer Splice & Group Modulation. Group Modulation Group modulation allows multiple groups of Kontakt's String Engine to be controlled from a single set of controllers. Arrange groups of strings, choose from several templates, and then route the groups to Kontakt's instruments for dynamic and flexible modulation. Grouped parameter control provides a simple and intuitive way to add depth to your existing string sections. Sequencer Splice The new addition to Action Strings 2 is a Sequencer Splice function. Sequencer Splice is an audio-laced version of the Kontakt Instruments chain, similar to the spread option from Logic, or the presets you can build in Sequencer. A preset is just a library with all of your instrument parts. With Sequence Splice you create a custom track by gathering pre-recorded instrument parts together into a new group. After that, you've now got a new track with all of the instruments selected and placed together. This lets you create the most complex patches quickly, easily and efficiently. Sequencer Splice is a key part of Action Strings 2, and provides an easy way to create custom patches that contain all of the strings from Action Strings in a single preset. Arrange Strings Action Strings is a collection of dynamic phrases that includes all of the strings from the pre-recorded instrument library. The intention is for you to arrange the strings to your liking and play them back as one track. Once the phrases have been arranged, they can be saved to a Kontakt preset
