I have xcode 4.3.2 on mac os 10.6. I tried: #include int main() { void \*handle; handle = dlopen("./SSAS.so", RTLD\_LAZY); return 0; } but I got a linker error: ld: warning: in /Users/doom/Desktop/work/SSAS/build/Debug-iphonesimulator/SSAS.build/Objects-normal/x86\_64/libSSAS.so, missing required architecture x86\_64 in file ld: library not found for -ISSAS clang: error: linker command failed with exit code 1 (use -v to see invocation) the project is configured as default with: It only contains a.m file. I have also tried with \_\_LD\_PRELOAD = "./SSAS.so" (but that didn't work either) I can't figure it out, I'm not even trying to create a dylib but an.so A: You need to use #include int main() { void \*handle; handle = dlopen("./SSAS.so", RTLD\_LAZY); return 0; } dl
