Latest drivers for Sony NW-E407 If you've got an issue you'd like a response to, the Sony Online Community is the place to find that response. This is where you can find answers to frequently asked questions and community-based answers to issues. Questions? Need Help? Go to our Community. On this page we answer your questions, show you how to fix a problem, and update our Drivers & Downloads section. Q: time_getdate() or time_taken()? I have a list of persons, and I want to show their activities (on time interval). So I want a list like: (time interval) - (user) - (time interval) - (user)... I am thinking about using 2 databases: one for the persons, one for their activities, but I am not sure about which solution is better. My solution (using PHP): 1- get all activities for a user using SQL and save in an array: mysql_query("SELECT * FROM 'activities' WHERE 'user' = ". Suserid); while(\$row=mysql_fetch_array(\$result)) { \$activitytime[] = \$row['activityTime']; } 2- give array with user id and activity time to jQuery/ajax that load the HTML, then I want to use time_getdate() or time_taken() and render it like: (user) - (activity time) - (user) - (activity time) but I don't know how I will calculate the time. Thanks A: Calculate the difference between the current time and the activity time, and then make an array that represent the current time and the first activity time. Q: ionic 3 modal dismiss all its childs when open in ion-list I have one modal and one ion-item d4474df7b8
