Enterprises today use AutoCAD to create, edit, and analyze design drawings, and to perform measurement, analysis, and other functions. AutoCAD is also used for architectural design. Many AutoCAD users are architects or interior designers. This article will introduce you to AutoCAD, and show you how it can be used to create a simple house plan. You will also learn about the AutoCAD 2018 and 2019 changes. For more AutoCAD information, see our AutoCAD training articles. AutoCAD is available on many platforms, including PC, MAC, mobile, and cloud.

1. Introduction to AutoCAD

If you are new to CAD, you may want to use a simple house plan as your first CAD experience. In this article, you will learn how to use AutoCAD and how to create a simple house plan. A house plan You will start

by creating a simple 3D house plan. This will help you get familiar with the basic elements of CAD. After you create the house plan, you will learn how to make it interactive. You can share your plans online with a Web-based service such as Dropbox, or with AutoCAD Cloud. The latter lets you share the house plan on the Internet. You can also save the file to your desktop computer or to a network folder.

Create a new drawing. This drawing will be a simple house plan. Start by creating a new drawing. A simple house plan. Note: You can create more complex house plans later. If you choose to create a more complex plan, use dimensions, which we will discuss shortly.

3. Open the DWG file

You can open the DWG file and begin to draw it. You can either click the New Drawing button (its icon is a right-facing arrow with a slash) on the New menu, or press Ctrl+N (⌘-N). A new drawing. Note: When you open a new

drawing, you can create a house plan, a drawing of a road, or a drawing of a building. You can also make an open drawing, which is a drawing you have opened and is not yet complete. 4. Make a room In the drawing, you can select a room by using the mouse. Move the mouse pointer
