First of all, I am very grateful to some anonymous donors for their donations in the form of citations. With the help of these citations I was able to pay for hosting fees for many years. For the years 2012-2013, I was paid with donations and sponsorships from ATM and Mercury Auto Mall

...organic compounds, compounds formed by carbon, hydrogen, oxygen and nitrogen atoms. The table of elements (see the periodic

table below) was designed by Dmitri Mendeleev back in 1869. A Nobel laureate, Niels Bohr, gave him the first Nobel prize in 1922. This table has been modified in many ways, from the original with the inclusion of more elements. There is a table of elements divided by the period, group and number of members. Figure 1. - The periodic table shown below was generated using the formulas from Amorphous Chemistry of Elements and the periodic table of the elements displayed here was drawn with the help of Open Source software called Periodic Table of Elements. - Instead of displaying only the elements, this software also displays information about their atomic number and mass. - The software has several features, including sorting the elements, export to image, text file, and plain

text, display of the periodic table using colours, giving clickable regions, and user's profile. - The software comes in two versions: one free and one paid. - If you like this software, you can donate and receive the updated version (with a lot of new elements) in return. - Periodic Table Of The Elements: - Various screenshots can be found at: This is a great chemistry calculator software that has many options for chemical calculations, such as calculating the atomic masses and numbers, state of

matter, melting and boiling points, acid and base, ionic bonds, equilibrium and non-equilibrium, and many others. [NUCLEAR FISSION] - Contains all features a chemist would need, including: chemical equilibrium, partial pressure calculations, atomic mass and number calculation, molecular mass calculation, ionic bond calculations, solid solution calculations, and more. [VIRTUAL REALITY] - Has advanced features to enable you to create virtual reality simulations of chemical

interactions. When you simulate the behaviour of molecules, you can control the temperature of the simulation and measure physical values such as temperature, and pressure, and calculate reaction rates. - VisuProChem is used in universities and companies for simulations of nuclear fission. Chalmers University of Technology (Sweden) developed this nice chemistry application. It is a convenient program to use for your chemistry and physics courses. It is an offline program for Windows XP

and later; it is not a web application.
The software is based on the Open
Source project LibreOffice 3.4.x,
