Visual LISP (Visual LISP for AutoCAD) Visual LISP is an application programming interface (API) developed by Autodesk. It was introduced in AutoCAD version 6. The API consists of two parts: a library (the API) and an application environment (the IDE). The API consists of a set of functions that can be used to customize or automate AutoCAD. These functions are added to a Visual LISP file, which can be compiled into a Visual LISP runtime library (rAPI) for use in an AutoCAD application. This is an alternative to using a user-defined function. Visual LISP can be integrated into AutoCAD through its add-ons. Visual LISP AutoCAD Visual LISP is a Visual LISP environment. It was introduced in AutoCAD version 6. The Visual LISP environment includes a Visual LISP Runtime (rAPI) that enables Autodesk to develop and deliver Visual LISP add-ons to AutoCAD. It has additional features that enable an Autodesk developer to create Visual LISP add-ons in Visual LISP. If a Visual LISP add-on is distributed to Autodesk in its runtime form, Autodesk retains the right to make any updates or modifications necessary to the add-on. AutoCAD/RAD Studio AutoCAD/RAD Studio (pronounced "automation") is a Microsoft.NET development framework and programming environment that enables programmers to create programs that make use of the AutoCAD or related drawing and design products. Autodesk's Microsoft-based development tools for AutoCAD are known as AutoCAD/RAD Studio. The AutoCAD/RAD Studio is a programming environment similar to Microsoft Visual Studio or Visual Studio.NET. RAD Studio offers only a subset of the features that are available in Visual Studio. The programming environment for AutoCAD is similar to that of Visual Basic for Applications (VBA) and Microsoft Visual C++, both languages which are the basis for the.NET development environment. The AutoCAD/RAD Studio supports only certain aspects of the C++ language. There are no direct support for concepts of exception handling and garbage collection.
