This can easily be done through default Windows features, but a lot more can be achieved with ABs Wallpaper Tray. Easily create a wallpaper collection The application wants to show you some of its potential right from the start, changing the wallpaper automatically with a preset picture, and adding more elements, such as a clock, calendar, and watermark text. The configuration panel also shows up, letting you set up the new wallpaper collection, and managing different behavior settings. [The role of polyamines in embryogenesis]. The involvement of polyamines in the early development of mouse embryo was studied. The amount of putrescine, spermidine and spermine in the embryonic tissues, placenta and ectoplasmic cells, respectively, was studied. The polyamines were accumulated at the early stages of mouse embryogenesis (days 7-10). Furthermore, polyamine concentrations in ectoplasmic cells correlated with the rate of cleavage of embryo. In vivo treatment of the embryonic cells with the ornithine decarboxylase inhibitor alpha-methyl ornithine resulted in an inhibition of polyamine accumulation and development. The data obtained demonstrate that polyamines are involved in embryonic development at the early stages of embryogenesis.
