Software development is done using C++, VBscript, Jscript and Delphi programming languages. The most recent release of AutoCAD is 2018 and it was also the first release in which Apple's Macintosh line of computers no longer had a full installation of the product. AutoCAD 2018 required macOS 10.11 El Capitan or macOS 10.12 Sierra or later to run. Internet connectivity is achieved through a COM automation application programming interface. Internet access is typically through a web server and a Java applet. Access to AutoCAD through other means was possible but the features are limited and non-existent on the free version of the software. Licensing AutoCAD sells a license and a perpetual license. On the perpetual license AutoCAD is installed on the user's computer and can be used for a single user or a corporate network. The AutoCAD 2018 allows the installation on multiple machines. A license is valid for a specific number of years, and users can install AutoCAD on up to four computers. Many universities offer free software licenses for students and faculty. The academic version of AutoCAD, AutoCAD LT, includes several functions that are prohibited in the full version, such as rendering, printing, and modifying the drawing. Students and faculty often need to complete a certain amount of education before obtaining an academic license. In addition to the standard license, AutoCAD LT is available with an LT Plus subscription that includes additional features. By using an online store, the features and functions of AutoCAD are available for the user. Unlike a full version, a student's or faculty's license is valid indefinitely. Academic licenses for AutoCAD LT are valid for one year and must be renewed every year. AutoCAD does not offer a network installation. To install the software on a network, the software must be installed on every computer in the network. Additionally, a license must be purchased for each computer that will access the drawing. If the network includes multiple locations, multiple licenses are required for each location. In addition to the core software, several third-party products, known as add-ons, have been created to provide additional functionality, including 3D modeling, web publishing and scripting. In the past, large CAD firms such as Delcam, Dassault Systèmes and PTC developed their own CAD products to automate and accelerate the production process. These products are known as CAD plug-ins or CAD a1d647c40b
