This is a PHP Class that allows you to debug AMF services, defined with the AMFPHP Frameworks. This AMF debugger includes a Service Navigator and Remote debug services. Features • Automated service discovery. • Direct invocation of AMF services. • Support for wildcard service definitions. • Remote debug capabilities. Download Pinta AMF debugger in action Requirements: • PHP 5.3 or greater. • A webserver configured to support the PHP FastCGI environment. • PHP 5.3 or greater compatible AMFPHP framework. Know More about Pinta AMF debugger Supported • PHP 5.3 or greater. • AMFPHP Framework. • FastCGI environment. • Remote debug. • Service navigator. • PHPUnit. Notes: This class is also available in the open source AMFPHP framework. For this version the location of the remote debugger was hardcoded into the service definition, but that's something that we can easily change in a newer version. Given that the debugging works only at the moment on a single webserver, we have currently limited functionality, and debugging capabilities. Github: License: Pinta AMF debugger is released under GPL v2 or greater open source license. Contact Pinta AMF debugger support team via: ## AMF 3.0 (aka AMF_Packet) Support for AMF3 & AMF3 Server [![[Get it on Packagist]][8]][8] [![[Build Status]][9]][9] Version 3.0 of AMF3 (formerly known as AMF_Packet) is fully supported by Pinta. It's released under MIT license. More about AMF 3.0:

What's New in the Pinta AMF Debugger?

Pinta is a utility that allows a developer to make custom AMF service calls, and view detailed output.
