The actual path is deeper than what you see when going through the registry editor. If the path is there, there should be the value with the registry information you're looking for. If you want to get all the information (such as file associations) from a given file type, then you'll need to navigate to the "file extension" registry value, and then look for a key with the name of the file type. You'll have to navigate the registry tree until you see the correct subkey, and then look for the key with the "file extension" name.
