Changelog: Version 1.4.0 - Fixed a regression where the proxy server could not connect after changing the proxy IP.

Installation method

Open the homepage of iProxyEver Proxy Chain for Windows, Mac or Linux. Enter the license key and click on the "Activate" button. Select "Settings" and then "Proxy". Select the countries where you want to use the proxy servers. Find the proxy address and click on the "Configure" button. Try to connect to the proxy and make sure that it works. Configure the Proxy IP address, type and press the "Add" button.

Proxy IP Address Type Result

The IP address needs to be a valid IP address of your server. Check the proxy settings (for the first time) and try to connect to a website through the new IP. If you want to exclude a specific country from the proxy list, double click on the country's name. Click on "Add Proxy" button and check if the proxy address you wanted to exclude from the list is now excluded from the list. If your IP change was successful, select "Save" and then "Update Proxy". If you have an error message, it means that your IP address was already included in the

list of the proxy. You can click "Remove IP" button to remove
