What's New In Java2D Image Viewer?

Program Is an Image Viewer for JAVA 2D. You can show Java2D images (JPEG, GIF and PNG). You can show also an Animation and export the image in JPG, GIF and PNG format. With the usual VIEW and EDIT button of the image viewer, Java2D Image Viewer also allows to show a FlowLayout which enables you to save the last display view of the image. And thanks to that the image can be saved either in the same JPG, GIF or PNG format than the last image. Functionality: Show an image file and load an image from disk. View the image and move the image. Edit the image and show or edit the parameters of the image. Show the image as an image-browser. Show an animation. Export the image to the system. Save the image as a graphic file in various formats (JPEG, GIF and PNG). Thanks to Java2D Image Viewer, you can set a zoom factor and the color depth in the configuration file of the image viewer. Screenshot: Java2D Image Viewer Java2D Image Viewer is a stand-alone software specially designed to enable you to load, save, render, and manipulate JPEG, GIF and PNG images.
