Change MAC Address Keygen Full Version For PC

Change MAC Address is a basic Windows software solution designed to change the MAC address of any network adapter installed on your computer. The market is already full of similar products, but Change MAC Address struggles to set itself apart with the help of what can be very well considered a minimal interface and intuitive options. Rookies aren't clearly the ones targeted by this application, but even so, Change MAC Address remains a very easy to use tool with all settings displayed right in the main window. The program automatically scans your system and detects the installed network adapters, letting you pick any of them for a quick configuration. It shows network information, such as IP address, netmask and gateway, but also the current and the real MAC address, with a dedicated field to let you input the new one. One of the good things about Change MAC Address is the fact that it comprises a "Reset" function to restore the original settings automatically. On the other hand, you can't save specific MAC profiles, so you have no other option than to input them manually every time. It does save however a list of the most recently used MAC addresses. A help file isn't available, but as you can see, everything's a breeze, which means that you don't really need one. Administrator privileges are needed to use the program on Windows 7 workstations. Which leads us to a rather simple conclusion: Change MAC Address does its job easily, but there are a lot of similar apps out there doing exactly the same thing. It adopts a straightforward approach however and doesn't affect system performance at all. 4.1 Overall: Features: Quality: Value: Changes MAC address on every adapter 11.10.2018 I'm a network technician and I do this all the time. Since my last change when I used that same app, the network has been unstable. I checked that and it was my fault. My router changed in firmware. I have updated it and will go through all my adapters and update the MAC address as well. This app doesn't do it. It changes just one adapter, not the whole network. So, I need to do it on every adapter. If I can get a choice, I'd prefer using another app. Necessary app 11.10.2018 This is an excellent app.

Also, you can use this program for small tasks (like changing your phone's network interface controller ID) or for those more complex ones (like replacing the NIC ID of a Linux computer), since this app is compatible with Windows, Linux, and Mac.
