As of 2018, Autodesk had released ten major releases (v.18, v.17, v.16, v.15, v.14, v.13, v.12, v.11, v.10, and v.9) of AutoCAD. The latest release is 2017, v.13. Before its first release in 1982, Autodesk started developing the first AutoCAD. Due to the incomplete technology of the time, Autodesk was not able to show any real sample product for this program. The following story is about the next version, AutoCAD 2.0, also called 2D-Manual, which was produced for public beta testing in late 1981.

Since this is a public announcement, it is not to be considered a part of the regular AutoCAD development process. The 1.0 version of AutoCAD was the first release of the application. (AutoCAD in those days meant 2D - 2D plus drafting and a plus means: manual [manual drawing] with tools). The first version of AutoCAD was only available for mainframe computers. Autodesk has now released a version for home PCs. With the development of the AutoCAD 2D-Manual the software company was able to show their software in a real

product, which led to more sales and leads. The name of this software was AutoCAD 2.0. AutoCAD, from the beginning, was for its primary intended use - real-time, on-screen drafting and design. This was really the first computer-aided design (CAD) application. It started in the early 1980's. The first version of AutoCAD was named AutoCAD 1.0. This version was only available for mainframe computers. (Since there was no public beta testing in those days, it can be assumed that the first release was only available to Autodesk employees). This version

was first released in 1982. Although the version number was 1.0, it was not an actual version number. The number 1.0 was simply a placeholder for the version number. In AutoCAD 1.0, the application was set up as a user level program. In other words, you had to be licensed for the software to run it. (Not sure how this came about but there was a "Version 1.0 User Manual" in the Autodesk library
