Upload items, split them and save resulted blocks to a custom location First and foremost, you should know that Advanced MP3 Splitter Gold only supports MP3 files. However, these can be uploaded both with a file browser or the "drag and drop" method, a feature which enhances ease of use. The main window displays the waveform of the added item and by double-clicking it, you can create a break point. Now you can drag it to another point and use three buttons to save the segment (in an MP3 format), remove the break point or play the respective piece of the audio file. In addition, you can set the overlap time, save the break points and a log file, as well as set the default output destination. You can also add a break point with silence detection, save multiple blocks and convert MP3 files to a WAV extension. More so, the program supports ID3 tags. A last assessment
