If I use: UIFont *font = [UIFont fontWithName:@"PixateSans"]; then I can use: NSLog(@"font size is %f",[font sizeWithAttributes:@{NSFontAttributeName:[font fontName]}]); to get the point size, but when I use [font fontName] I get a UIFont which doesn't seem to contain the point size. Does anyone know how to get the point size from a UIFont? A: That is because UIFont is not the right place to get it. UIFont has fontSize property which tells you the size of the font. And you can get it this way: UIFont *font = [UIFont fontWithName:@"PixateSans"]; float fontSize = [font size a1d647c40b

Auditory brain stem response thresholds in children with spastic diplegia and hemiplegia. Auditory brain stem responses (ABRs) were studied in 30 children with spastic diplegia and hemiplegia. Their ages ranged from 3 to 8 years. In these children, ABRs were abnormal in 42% of the children with hemiplegia and in 70% of those with diplegia. The abnormalities in the ABRs were mainly found in the central component of wave V of the responses. The degree of abnormalities in ABRs was correlated with the degree of hemiplegia and/or diplegia. In patients with hemiplegia and diplegia, the more severe the hemiplegia or diplegia, the greater the abnormalities in the ABRs. These data suggest that the ABRs are useful in assessing auditory function in children with spastic hemiplegia and diplegia. R. J., Kewley, L. J. 2008, ApJ, 678, 804 Allen, D. A., Driver, S. P.
