Data exchange is also implemented with other applications such as CorelDraw and Microsoft Visio. Technical infrastructure In addition to data exchange, AutoCAD provides a technical infrastructure allowing access to its data. With the AutoCAD WS Explorer (formerly known as the Autodesk Web Services Explorer), or AWE (an acronym for Autodesk Web Explorer) people can access and update AutoCAD information online from web browsers. Using the AWE web interface, applications can make service requests directly from the web browser or through a web service such as the Microsoft Internet Information Services (IIS). Autodesk will update the data when it is modified. AWE provides access to a number of different data sources and services. These include (but are not limited to): Level of precision for attribute values Class definition Class usage Properties AutoCAD applications Transaction statistics Impact on society, AutoCAD has had a significant impact on society, and has enabled a variety of engineering and architectural feats. Engineers and architects use AutoCAD to create plans and layouts of high-tech devices, such as computer chips, airplane parts, and automobiles. On the other hand, some AutoCAD-related software can make production of those products less efficient. Although cost cutting is usually not the goal of AutoCAD, when it is, a company using this software can adopt strategies to achieve that goal. A recent example of AutoCAD being used to make the process of producing products less efficient was in the design of the Saturn V rocket. Engineers used AutoCAD to produce 3-D models of the boosters and to do space physics simulations. With a low level of precision in the 3-D models, the design was less efficient than it could have been. To make the process more efficient, the precision of the 3-D models was increased. An additional use of AutoCAD by creating two-dimensional drawings, often called building blueprints, for new construction. As students learn the basics of AutoCAD were also AutoCAD being appreciate t

What's New in the AutoCAD?

Multi-threaded Exporting If you use advanced export settings in AutoCAD, the Windows operating system now manages your tasks in a multi-threaded environment. This allows for faster, less resource intensive, high-quality exports. Improved round-trip scaling. When you zoom in on a drawing, the drawing appears in its actual size, as opposed to a smaller size. Automatic location of dimensioned views. Use the new ZOOM command and mark positions for dimensioned views, automatically placing the dimensioned view on the proper location based on the view's size. Updated Polar Coordinate system in Map Project The updated Map Project allows you to use an angular-based coordinate system to locate the easting and northing of the map. Minor updates to AutoCAD: Invisibility option is now available in the Special Text tab of the Text options. Special fonts are now available to choose from in the font list. Errors and warnings generated during drawing creation are now easier to read. Lighting rendering properties in the new Ray Traced lighting system are now configurable. The Release information box in the top right-hand corner of the drawing window now contains a time stamp to indicate when the drawing was updated. The Specify Extruded View button is now available as a separate command. New palettes: The Freeform palettes show you the effects of using the various AutoCAD Freeform commands. The 2D Design palettes show you all of the options for editing 2D text objects. The 2D Pattern palettes show you all of the options for editing 2D drawing objects. New Ribbon toolbars: The 3D Modeling palettes now feature a 3D Scene tab that provides quick access to the current scene. New options in the Home tab: New command: Bring to Front. The Make Unique check box is available on the Home tab, and the Adjust Objects property on the Home tab of the ribbon. New dialogs: The Master View dialog now provides flexibility in choosing the view you want to master and the name you want to associate with it. The Image Properties dialog now provides m
