If you want to get started with this wonderful app, you can do so by visiting its official GitHub repository. For me, the best software is the best software that solves my problems. So my research turned up this free tool called Git Ninja, which is an open-source utility that enables you to create a Git repository without using the command line. Why would you want to use the command line for creating a Git repository? The simple answer is that you want to use it for a bigger purpose, that is to manage your Git repositories. Yes, you may be a Git ninja if you can use the command line to create Git repositories. Git Ninja also offers some useful features that allow you to efficiently manage your Git repositories. For example, you can organize your commits into different branches and easily switch between them. In addition, the app is compatible with all major operating systems, including Windows, macOS, and Linux
