Architecture Architecture designers and drafters can use the Architecture application to prepare and execute architectural design projects from conceptual to construction. The same toolset is used for architectural modeling, drawing, and documentation of building construction and demolition. Architecture allows the design and drafting of one-off designs and large-scale commercial designs. Civil 3D Civil 3D is a BIM/CMMS software tool for civil engineering, construction management and geospatial construction. Originally developed by S+B, and now developed by Bentley Systems, Civil 3D supports the integration of Autodesk building information modeling (BIM) technologies to add functionality to traditional engineering and construction software. The application is developed to be used as a "BIM-based, block-oriented" building information modeling software (BIM) and simulation-based collaborative platform for the design and construction industry. Civil 3D 2013 and later allows direct utilization of various CAD/CAM applications like Autodesk® BIM360, Bentley® Revit, Bentley® FDM, Bentley® CAD, Bentley® Collaboration Tools and more. Autodesk A360 from 2016. It is an integrated collaborative BIM and CAD/CAM application for construction design, documentation, engineering, quality management and collaboration. First announced in March 2011, Autodesk Civil 3D 2012 was originally targeted at the construction and infrastructure market, providing features such as a workflow-based coordination of design and documentation, improved surface and mass modeling, and construction rules for calculating material quantities and cost. The release of Autodesk Civil 3D 2013 (Autodesk Civil 3D Professional) in September 2012 saw the addition of enhancements to Autodesk Revit Architecture, including support for multiple architecture design and drafting workflows, interface elements, workflows, and display workflows. With the release of Autodesk Civil 3D 2015, Autodesk has extended the functionality of Civil 3D to cover a wider range of construction activities. The new application's focus is on sharing, connecting and communicating information. With Autodesk Civil 3D 2016, Autodesk enhanced collaboration through the availability of more new and improved views for multiple viewers, the introduction of a new "Lighting view", streamlining of the design process, improved usability and efficiency, and a more intuitive interface.
